

ID

Name

TownID

```
SQL command - LibreOffice Base: Query Design
File Edit View Insert Tools Window Help
SELECT "Town", "ID"
FROM "Town"
ORDER BY "Town"
```

Properties: List Box

General Data Events

Data field..... TownID

Input required..... No

Type of list contents... Sql [Native]

List content..... "SELECT "Town", "ID"FROM "Town" ORDER

Bound field..... 1

Code for the listbox is created in direct SQL with breaks.

Properties: List Box

General Data Events

Data field..... TownID

Input required..... No

Type of list contents... Sql [Native]

List content..... "SELECT "Town", "ID"FROM "Town" ORDER

Bound field..... 1

SELECT "Town", "ID"  
FROM "Town"  
ORDER BY "Town"

OK

Open the text editor to change the code. Add a space after comma and press OK.

Code has been changed. Semicolon has been set for every break.

Type of list contents... Sql [Native]

List content..... "SELECT "Town", "ID";"FROM "Town";"OR

And this will be the code, which will appear if reopening query editor. Two rows will be lost, won't work any more.

```
SQL command - LibreOffice Base: Query Design
File Edit View Insert Tools Window Help
SELECT "Town", "ID"
```
