

The screenshot displays a word processing application interface. The main document area contains a Table of Contents (TOC) with entries: 'Table of Contents', 'Testdokument...', and 'Second Chapter...'. Below the TOC, the document content begins with 'Testdokument', followed by 'Some Text Content', and 'Second Chapter'. The right-hand side features a 'Properties' panel with three sections: 'Style' (set to 'Contents Heading'), 'Character' (set to 'Liberation Serif'), and 'Paragraph' (showing Spacing and Indent settings). The status bar at the bottom indicates 'Page 1 of 1', '14 words, 90 characters', 'Default Page Style', and 'read-only : Table of Contents1'.

Cursor is set in heading of TOC, which is set read-only (see status bar).

Style shows „Contents Heading“.

Character shows „Liberation Serif“ → **wrong**, it is the last chosen style, which is editable.

Nothing else will be shown as chosen in Character.

Paragraph won't show anything except Spacing and Indent.

Spacing and Indent aren't write protected → **wrong**, you could change content in a read-only area.

1. All informations about „Properties“ should be shown.

2. All fields in „Properties“ should be write protected in a read-only area.
